

Supplementary Materials

A submitted manuscript should stand on its own: It should make a sound presentation of the rationale, research questions, and methods and data analyses, as well as convincing arguments in support of the reported findings, conclusions, and implications if read on its own.

Nonetheless, the *BERJ* editorial team encourages – *but does not require* – authors to make use of the Journal's facility for supplementary online materials to accompany the print publication of the article. This allows for a more concise print article while providing, where meaningful, more detailed supporting information in an online format most useful to fellow researchers. Supplementary material will be provided along with the article in the online publication of the Journal, with a URL reference placed in the print publication. To be accepted, supplementary material must contribute substantively to the conclusions of the paper.

Supplementary material is peer reviewed as part of the acceptance process for the paper. However, supplementary materials are not copy edited during the production of the Journal but are presented as uploaded by the author. Authors must ensure that all supplementary materials are clearly presented and well-formatted, and that the terms and titling match those used in the rest of the paper.

We do not encourage submission of references as supplementary material because they will not be linked to the publication and will not contribute toward the citation measures of the papers in question.

Types of supplementary material

The Journal accepts supplementary material for review of the following type(s):

Methods and Materials. Detailed descriptions of materials and methods which would enable fellow researchers to replicate portions of the study if desired. *BERJ* requires authors to provide concise descriptions of the methods of the study in the text, and refer to the supplementary materials—if included, for full descriptions and details.

Other Supporting Sections. Additional text information on controls, supplemental results, observations, or discussion that contribute meaningfully to the print paper. This may include transcripts or other materials in the original (non-English) language.

Supplemental Figures and Tables. Figures and Tables that are of a size or format that cannot be accommodated in the print publication, as well as Figures and Tables that provide additional background information that contributes meaningfully to the conclusions of the paper but may not

be necessary in the paper body. For example, a table detailing background demographics of participants in a study if such information is being used solely as ancillary information or statistical control.

Audio, Video, Animations, Presentations, Photographs. Sound files, video, simulations, models, or other dynamic data essential to a full understanding of the arguments in the paper text.

Referencing supplementary material in the paper

Authors should ensure that each piece of supplementary information is referred to at least once in the print version of the paper as follows:

- ***Supplementary Figures, Tables, Audio, Video, etc.:*** Label and number the item as you normally would, but add a prefix S to the number. So Figure S1, Table S2, Video S1, Audio S3, Database S1, etc.
- ***Methods and Materials and other supporting sections:*** Include a note at appropriate point(s) in your text that reads, "Additional (Methods/Results/Discussion, etc.) are available as supplementary material accompanying the online article".
- ***Shared Data:*** Include a note at the end of your results section that reads, "Data on which these results are based is shared as supplementary material accompanying the online article".

Finally, at the end of the reference list, include a statement which lists all supplementary material provided with the article. For example:

Supplementary Information linked to the online version of the paper at Wiley-Blackwell

- Methods Supplement
- Figures S1, S2
- Table S1
- Video S1
- Database S1
